TITLE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said TITLE OF INVENTION: Monoclonal Antibody, and Their Therapeutic Use in an Adept System FILE REPERENCE: Monoclonal Antibody to CEA.
CURRENT APPLICATION NUMBER: US/09/17,945
CURRENT FILING DATE: 1998-10-29
PRIOR APPLICATION NUMBER: GB9703103.3
PRIOR PILING DATE: 1997-02-14
PRIOR APPLICATION NUMBER: GB9609405.7
PRIOR PILING DATE: 1996-05-04
PRIOR PILING DATE: 1996-05-04
PRIOR FILING DATE: 1997-04-29
NUMBER OF SEQ ID NOS: 131
SOPTWARE: Patentin Ver. 2.1
SEQ ID NO 19
LENGTH: 255
TYPE: PRT
ORGANISM: Artificial Sequence
PEATURE:
OTHER INFORMATION: Description of Artificial Sequence: humanized

New humanised antibodies specific for glycated albumin - recombinant expression of humanised mouse antibodies, use treating diabetic vasculopathy. n - prepared useful for, e.g.

Example 2; Page 15; 27pp; English.

The sequence is that of a humanised variable region of the A717 antibody light chain VI-1. The antibody has specificity for glycated albumin (GA) and is capable of neutralising the effects of GA in vivo. It can be used in the manufacture of therapeutics useful for the prophylactic treatment of complications of diabetes (especially diabetic vasculopathy and retinopathy) and atherosclerotic cardiovascular disease. The genetically engineered antibodies are specific as they only interact with GA but not other proteins and may be easily prepared in pure form. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               片
                          This invention describes a novel antibody that specifically binds mature human interlevkin (IL)-lbeta, and binds the same epitope on mature human interlevent of the invention have antibody Mu007 or humanized antibody Hu007. antiinflammatory, osteopathic, antiallergic, cerebroprotective, antiasthmatic, immunosuppressive and antibacterial activity and can be for treating rheumatoid arthritis or osteoarthritis, or for inhibiting treating edestruction in a subject. The antibody is also useful for graft versus host disease, Crohn's disease, or inflammatory bowel graft versus host disease, Crohn's disease, or inflammatory bowel disease. This sequence represents the humanised murine Mu007 light chain variable region described in the disclosure of the invention
      Sequence 107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 70-71; 98pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New IL-1beta antibodies, useful for treating allergy, septic or endotoxic shock, septicemia, stroke, asthma, graft versus host disease, Crohn's disease, or inflammatory bowel disease.

The analogue is useful for the manufacture of a medicament for treating rheumatoid arthritis or osteoarthritis or for inhibiting cartilage destruction. The present sequence represents an antibody Hu007 light chain variable region

The antibody of the invention have antirheumatic, antiarthritic, antiarthritic, interpretative, antiallergic, cerebroprotective, antiasthmatic, immunosuppressive and antibacterial activity and can be used in a vaccine. The antibody is useful for manufacturing a medicament for treating rheumatoid arthritis or osteoarthritis, or for inhibiting cartilage destruction in a subject. The antibody is also useful for treating allergy, septic or endotoxic shock, septicaemia, stroke, asthma, graft versus host disease, Crohn's disease, or inflammatory bowel disease. This sequence represents the humanised murine Mu007 light chain

15-MAY-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an analogue of humanized antibody Hu007 that specifically binds mature IL-1beta and comprises at least one amino acid substitution at positions 54, 55 or 56 of the heavy chain complementarity determining region 2 (CDR2). The analogue is useful for the manufacture of a medicament for treating rheumatoid archiritis or osteoarthritis or for inhibiting cartilage destruction. The present sequence represents an antibody Hu007 analogue light chain sequence
                                                                                                                                                                                                                 AAR92082 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New analog of humanized antibody Hu007 that specifically binds mature 1 beta, useful for the manufacture of a medicament for treating rheumatoid arthritis or osteoarthritis.
